 - 4.1 Handling Precautions

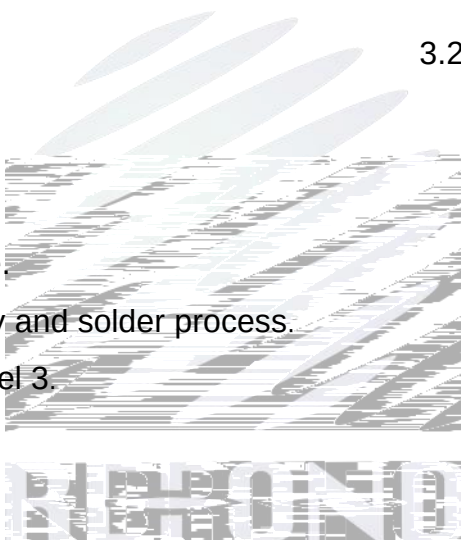

The Colour LED which was fabricated using a green chip Package Dimension :
3.2mmX1.25mmX1.1mm.

LED

3.2mmX1.25mmX1.1mm

- ▶ Extremely wide viewing angle.
- ▶ Suitable for all SMT assembly and solder process.
- ▶ Moisture sensitivity level: Level 3.
- ▶ RoHS compliant.

- ▶ Optical indicator.
- ▶ Switch and symbol, display.
- ▶ General use.

Notes

All dimensions units are millimeters.

All dimensions tolerances are $\pm 0.2\text{mm}$ unless otherwise noted.

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Test Condition	Symbol		Value			Unit
				Min. ()	Typ.	Max.	
Spectral Half Bandwidth	I _F =20mA	λ		--	30	--	nm
Forward Voltage	I _F =20mA	V _F	G1	2.8	--	2.9	V
			G2	2.9	--	3.0	V
			H1	3.0	--	3.1	V
			H2	3.1	--	3.2	V
			I1	3.2	--	3.3	V
			I2	3.3	--	3.4	V
			J1	3.4	--	3.5	V
Dominant Wavelength	I _F =20mA	λ_D	D20	517.5	--	520	nm
			E10	520	--	522.5	nm
			E20	522.5	--	525	nm
			F10	525	--	527.5	nm
			F20	527.5	--	530	nm
Luminous Intensity	I _F =20mA	I _v	1AU	260	--	330	mcd
			1AV	330	--	430	mcd
			1CG	430	--	560	mcd
			1CL	560	--	700	mcd
			1CM	700	--	900	mcd
Viewing Angle	I _F =20mA	2θ1/2		--	140	--	deg
Reverse Current	V _R =5V	I _R		--	--	10	μA
Thermal Resistance.	I _F =20mA	R _{THJ-S}		--	--	450	/W

Notes : V_R=5V For test conditions. V_R=5V

Table 2-3 Reliability Test Items And Conditions

Test Items	Ref.Standard	Test Condition	Time	Quantity	Ac/Re /
Reflow	JESD22-B106	Temp:260 max T=10 sec	2 times	22Pcs.	0/1
Temperature Cycle	JESD22-A104	100 30 min ↑↓ 5 min -40 30 min	100 cycles	22Pcs.	0/1
Thermal Shock	JESD22-A106	-40 15min ↑↓ 100 15min	300 cycles	22Pcs.	0/1
High Temperature Storage	JESD22-A103	Temp:100	1000 hrs.	22Pcs.	0/1
Low Temperature Storage	JESD22-A119	Temp:-40	1000 hrs.	22Pcs.	0/1
Life Test	JESD22-A108	T _a =25 I _F =20mA	1000 hrs.	22Pcs.	0/1

Table 2-4 Criteria For Judging Damage

Test Items	Symbol	Test Condition	Criteria For Judgement	
			Min.	Max.
Forward Voltage	V_F	$I_F=20\text{mA}$	-	$U.S.L^*) \times 1.1$
Reverse Current	I_R	$V_R=5\text{V}$	-	$U.S.L^*) \times 2.0$
Luminous Flux	Φ	$I_F=20\text{mA}$	$L.S.L^*) \times 0.7$	-

Notes

1.U.S.L: Upper standard level

L.S.L: Lower standard level

2.The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform,the reliability experiment was taken under good heat dissipation conditions. When customers applies the LED to the series and parallel circuit,should take consideration of all the factors such as the current, voltage distribution, heat dissipation and others.

3.The technical information shown in the data sheets is limited to the typical characteristics and circuit examples of the referenced products. It does not constitute the warranting of industrial property nor the granting of any license.

Fig.3-1 SMT Reflow Soldering Instructions SMT

Table 3-1 Parameter

Average temperature rise speed	Tsmax	T _P	3 °C/	Max 3 °C/ s
Preheating: minimum temperature	(T _{smin})		150 °C	
Preheating: Max temperature	(T _{smax})		200 °C	
Preheating: Time	T _{smin}	T _{smax}	60 - 120	60s-120s
Time limited to maintain high temperature: the temperature		(T _L)	217 °C	
Time limited to maintain high temperature: The Time		(t _L)	60 - 150	60s-150s
Peak /Classification of temperature:	/	(T _P)	260 °C	
Time limit classification of peak temperature time		t _p	10	Max 10s
Hold time within 5 °C with the actual peak temperature (T _P)		(T _P)	30	

Notes

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be damaged.

(2)Whensoldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

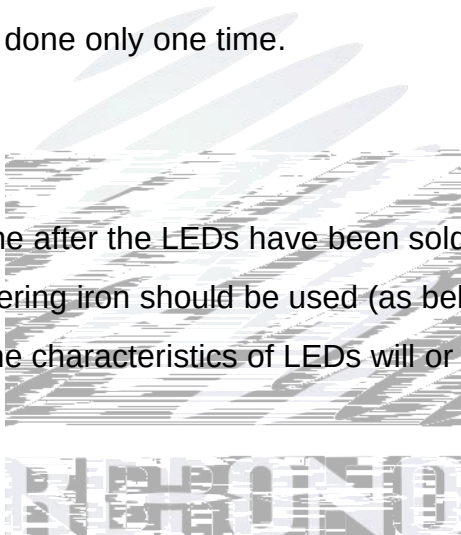

(1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds

(2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED

3.1.3 Cautions

(1) Components should not be mounted on warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board.LED

(2) Do not apply mechanical force or excess vibration during the cooling process to normal temperature after soldering. Do not rapidly cool device after soldering.

(1) LED operating environment and solder element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement. LED

(2) In order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the product.

(4) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

(5) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED
