

SPECIFICATION

REFOND P/N

RF-W*HP32DS-FH-I3

R&D

Mass Product

1. Description

1.1

The White LED which was fabricated using a blue chip and the phosphor

Product Package: 2.8mmX3.5mmX0.7mm.

LED

2.8mmX3.5mmX0.7mm

1.2 Features

- ▶ PLCC-2 Package.
- ▶ Extremely wide viewing angle.
- ▶ Suitable for all SMT assembly and solder process. SMT
- ▶ Available on tape and reel. b' AQ5' € U ñ ñ 1 p fE" W5' € @ Q G
- ▶ Moisture

1.4 Package Dimension

1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Code	Symbol	Test Condition	RF-Value			Unit
				Min.	Max.	Typ.	
Forward Voltage	Rank Y0	V_F	$I_F = 100\text{mA}$	8.6	9.0	8.9	V
	Rank Z0			9.0	9.4		V
RF-W57HP32DS-FH-I3	Rank FC6	ϕ	$I_F = 100\text{mA}$	140	150	155	lm
	Rank FC7			150	160		lm
	Rank FC8			160	170		lm
RF-W6HP32DS-FH-I3	Rank FC6	ϕ	$I_F = 100\text{mA}$	140	150	155	lm
	Rank FC7			150	160		lm
	Rank FC8			160	170		lm
Reverse Current		I_R	$V_R = 15\text{V}$	---	10	---	μA
Viewing Angle		2 θ 1/2		---	---	120	Deg
Color Rendering Index(		CRI	$I_F = 100\text{mA}$	80	---	81.5	---
Thermal resistance		R_{THJ-S}		---	---	15	/W

Table 1-2 Absolute Maximum Ratings at Ts=25°C

Parameter	Symbol	Rating	Units
Power Dissipation	P_D	1080	mW
Forward Current	I_F	120	mA
Peak Forward Current	I_{FP}	220	mA
Reverse Voltage	V_R	15	V
Electrostatic Discharge(HBM)	ESD	2000	V
Operating Temperature	T_{OPR}	-40 ~ +105	
Storage Temperature	T_{STG}	-40 ~ +105	
Junction Temperature	T_J	125	

Notes

1. 1/10 Duty cycle, 0.1ms pulse width. 0.1ms, 1/10.
2. The above forward voltage measurement allowance tolerance is $\pm 0.1V$. $\pm 0.1V$.
3. The above color coordinates measurement allowance tolerance is 0.005. 0.005.
4. The above luminous intensity measurement allowance tolerance $\pm 10\%$. $\pm 10\%$.
5. Care is to be taken that power dissipation does not exceed the absolute maximum rating of the product.
6. All measurements were made under the standardized environment of Refond.
7. When the LEDs are in operation the maximum current should be decided after measuring the package temperature. Junction temperature should not exceed the maximum rate. LED
8. ESD yield is over 90% at 2000V ESD (HBM). ESD protection during products handling is needed. 90% LED
ESD2000V ,

2.5 Criteria For Judging Damage

Table 2-4 Title

Test Items	Symbol	Test Condition	Criteria For Judgement	
			Min.	Max.
Forward Voltage	V_F	$I_F=100mA$	-	$(U.S.L^*) \times 1.1$
Reverse Current	I_R	$V_R = 15V$	-	$(U.S.L^*) \times 2.0$
Luminous Flux	Φ	$I_F=100mA$	$(L.S.L^*) \times 0.7$	-

Notes

1.U.S.L: Upper standard level

L.S.L: Lower standard level

2. The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform, the reliability experiment was taken under good heat dissipation conditions. when customers applies the LED to the series and parallel circuit, should take consideration of all the factors such as the current, voltage distribution, heat dissipation and others.

Hold time within 5 °C with the actual peak temperature (TP)	(TP)		30	Max 30s
5 °C				
Cooling speed			6 °C/	Max 6 °C/
Needed time from 25 °C to Tp	25 °C		8	Max 8

Notes

(1)Reflow soldering should not be done more than two times. In the case of more than 24 hours passed soldering after first, LEDs will be damaged.

24

LED

(2)When soldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

(1) When hand soldering, keep the temperature of iron below less 300 less than 3 seconds

300

3

(2) The hand solder should be done only one time.

3.1.2 Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or will not be damaged by repairing.

LED

LED

3.1.3 Cautions

The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be influence to the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when use the picking up nozzle, the pressure on the silicone resin should be proper. LED

LED

(2) Components should not be mounted on warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board.LED PCB

4. Handling Precautions

(2) In order to prevent ex-ternal material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM,the single content of Chlorine element is required to be less than 900PPM,the total content of Bromine element andrChlorine element in the external materials of the application - r products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

LED

(4) Handle the component along the side surface by using forceps or appropriate tools; do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.

Fig 4-1 Title

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the mean while, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

LED

LED

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED

LED

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the

package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

LED

Table 4-1Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	≤ 30	$\leq 75\%$	Within 1 Year From Date
	After Opening Aluminum Bag	≤ 30	$\leq 60\%$	24hours 24
Baking		60 ± 5	-	≥ 24 hours 24

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time baking treatment should be performed after unpacking and based on the following condition 60 5 for above 24 hours.
